Betonmauer vor Zeigergraben

Kugelfangwall

XRF-Messpunkte

Pb-Gehalt: > 2'000 ppm

Pb-Gehalt: 1000-2000ppm

Pb-Gehalt: 500-1000 ppm

Pb-Gehalt : 200-500ppm

Pb-Gehalt: <200 ppm

This aerial map displays the 300m Schiessplatz Oberfeld. The map is overlaid with various data points and features. A large, irregularly shaped area in the center-left is outlined in red, representing a 'Kugelfangwall' (ball catch wall). To the right of this area, a long, narrow structure with a brown roof and white walls is visible, likely a 'Betonmauer vor Zeigergraben' (concrete wall in front of a marker ditch). Three specific locations are marked with labels in white boxes: 'BS-1' is located on the red-outlined wall; 'BS-2' is located on the concrete wall; and 'BS-3' is located on a path or road to the right of the concrete wall. Numerous colored dots are scattered across the map, representing XRF measurement points. The dots are color-coded according to lead (Pb) concentration: dark red for > 2'000 ppm, red for 1000-2000ppm, orange for 500-1000 ppm, yellow for 200-500ppm, and green for <200 ppm. The map shows a mix of green grass and dark green trees, particularly in the lower-left quadrant.
